MaCoi Hollins

Healthcare Data Science and Clinical Analytics

Kenner, LA | github.com/MaCoiCH-22

Healthcare data analyst and M.S. Applied Data Science candidate. Uses SQL Server and Python to validate hospital data, automate Excel quality checks, and investigate reporting discrepancies. Experience reviewing clinical trial data against source records.

Technical Skills

SQL Server (T-SQL), SQLite, Python (pandas, openpyxl, scikit-learn), Excel (PivotTables, macros), Git/GitHub. Graduate training in R, statistics, machine learning, and time-series analysis.

Professional Experience

Reimbursement Analyst | Genesa Reimbursement Group | 2026–Present

- Adapt T-SQL checks for hospital charge, encounter, and remittance data. Detected a charge-data import with no usable records despite a successful load.
- Reconcile Medicare bad debt to HCRIS cost report totals, tracing variances through EDI 835 remittance, PS&R, and hospital records for audit review.
- Develop and test Python automation that standardizes hospital Excel workbooks and flags validation exceptions for analyst review.

Clinical Research Data Coordination | DelRicht Research | Contract

- Checked captured data against source records across concurrent clinical trials and resolved discrepancies with clinical teams.

Additional Experience

Production Associate | OutSolve | 2024–2025 — Validated workforce data for compliance reports.

Laboratory Technician | Eurofins | 2024 — Documented testing and chain of custody.

Pharmacy Operations | General Meyer Pharmacy | 2022–2023 — Maintained prescription and insurance records.

Data Manager and Analyst | The Times-Picayune Doll & Toy Fund | Seasonal — Managed donor data and recurring reports.

Selected Projects

Clinical Trial Registry Intelligence | AI-assisted portfolio project

- Python and SQLite analysis of 5,524 public study records found posted results for 1,264 of 4,466 completed trials at the registry snapshot.

Clinical Data Quality Engine | AI-assisted portfolio project

- FHIR R4 validation pipeline processed 1,156 synthetic entries and identified 28 records blocked solely by upstream failures.

Customer Churn Model Comparison | Graduate team project

- Led evaluation of four classifiers and selected logistic regression (holdout ROC AUC 0.845). Used AI to assist with code drafting.

Education

University of San Diego | M.S. Applied Data Science, expected Summer 2027

Dillard University | B.S. Chemistry, 2022

Xavier University of Louisiana | Professional pharmacy coursework
